Dome series detailed operating instructions

I. Remote Controller--key features additional information

F1-F4:advanced user-defined extensions, design for specific users and machine, general users will not need it. Remote is a multi-model-fits-all.

HOME: shortcut key of preset position, the user can customize a particular location.

DISP: display software version number, non-customers use function key.

PRSET: preset point setting key.

PATTERN: set the parade path to preset point.

RUN: Run "PATTERN" setted parade path, and quit the cruise mode.

A: shortcut key of preset position (parade starting point).

B: shortcut key of preset position (parade ending point).

CAM: shortcut key of camera selection mode

SHOT: into the preset point of call mode shortcut.

AUTO: Automatic parade.

DELETE: delete key of the preset point

SPEED: camera speed setting key.

ENTER: confirm button, and automatic cruise stop button.

P1-P8: shortcut of entering preset point.

S1-S4: shortcut of different cruise speed.

SETUP: Baud rate and protocol settings button

II. Setting Methods

1. Call preset points

Press the "SHOT" button to enter Preset point call mode, respectively, enter the numbers 0-9 can be directly invoked 9 below preset point, do not need to press "ENTER" button to confirm, the camera will reach preset point position.

If want to enter 9 or more preset point, please press "-/--" key

To delete the wrong, please press "C" key and press "ENTER" key, the camera will arrive the preset point location.

2. Remove existing preset points

Press "DELETE" button for 3 seconds to enter delete mode preset points, respectively, enter a number 0-9 can directly delete the following nine preset points, do not need to press "ENTER" button to confirm.

If you want to delete more than 9 preset points, please press "-/--" key, then you can enter values greater than 9.

To delete the wrong, please press "C" key, then press "ENTER" key, the camera will delete this preset point.

3. Set up a new preset points

Press "PRSET" button for 3 seconds to enter preset point setting mode, enter the numbers 0-9 respectively, can be directly preset settings the 9-below point, do not need to press "ENTER" button to confirm. To set up more than 9 preset points, press "-/--" key, you can enter values greater than 9. To elete the wrong, plese press "C" key, then press "ENTER" key to confirm, when the preset point was successfully set.

4. Set tour path of preset points

The first step, set preset points. Example, pre-set point 1,point 2 and points 3, the location of these three preset points and camera lens positions are different, that is, non-linear three positions.

 The second step,determine the parade path. Such as a parade of the three-point manner is 1-2-3-2-1 ... ..., that is repeated among 123 parade.

 The third step, the memory parade path. Press "PATTERN" button 3 seconds into the parade path of preset points, the beginning of setting mode, enter a number 1,2,3,2,1, respectively, the camera will reach the preset point position, that is to guide the camera to go a complete manual parade between 3 points, and then press button "PATTERN" 3 seconds to complete the setup.

 The fourth step, press "RUN" button to start to run this parade pattern. The camera will follow a ready pre-set path to start parade, and also will stay in the running(the stay location is the all preset points). To exit the cruise mode, just press"RUN" button.

5. To set the starting point to the end of the parade path

Methods: The first step, set preset points. Click "PRSET" button 3 seconds to enter preset point setting mode, respectively, enter the letters AB directly to set start and end point. If you are running and found anti-AB path, then re-set the AB, can be exchanged AB location.

 The second step, press "AUTO" key to run the AB model. camera repeatedly uniform parade between AB, press S1-S4 can change the speed of parade. To stop the parade , press "ENTER" button.

6. To set the baud rate and protocol

 Methos: Press "SETUP" button 3 seconds into camera's set the baud rate and protocol mode, use the "up-down "key to select "P" protocol or "D" protocol, use the "left-right" key to change the baud rate,

there are 1200 bps, 2400 bps, 4800 bps, 9600 bps optional, and then press "ENTER" button.

III. camera Address Setting

1. DIP Switch Description

Open the camera, you will see the PCBA, there is a 10-bit mode DIP switch, which DIP 1-6 is the camera address; DIP7-8 is the baud rate,DIP7hit the ON , DIP8hit the OFF, baud rate is 1200bps; DIP7hit the OFF , DIP8hit the OFF, baud rate is 2400bps; DIP7hit the ON , DIP8hit the ON, baud rate is 4800bps; DIP7hit the OFF , DIP8hit the ON, baud rate is 9600bps;DIP 9 is the camera protocol, the switch hit the ON is a Pelco-P, hit the OFF switch is Pelco-D; DIP 0 is a RS485 terminal resistance, hit the ON switch is to connect a 120 resistor

2. Camera Address Setting

Camera addresses are set aside in the form of binary code on switch. To simultaneously control more than one camera at the same time, need to set up different address. For example, if you want to set on the 4th camera's address, first decimal 4 must be converted into a binary, that is 100. Then hit the DIP 3 switches ON, while hit in the other switch among DIP 1-6 OFF.

3. To simultaneous control several cameras, the specific address settings, please see the following comparison table (in the following table, use 1 to indicate when DIP switch position is ON, and use 0 for OFF)

Camera number (decimal)	Camera address (binary)	DIP-switch position (camera switch position 1-6)
NO.1	0 0 0 0 0 1	1 0 0 0 0 0
NO.2	0 0 0 0 1 0	0 1 0 0 0 0
NO.3	0 0 0 0 1 1	1 1 0 0 0 0
NO.4	0 0 0 1 0 0	0 0 1 0 0 0
NO.5	0 0 0 1 0 1	1 0 1 0 0 0
NO.6	0 0 0 1 1 0	0 1 1 0 0 0
NO.7	0 0 0 1 1 1	1 1 1 0 0 0
NO.8	0 0 1 0 0 0	0 0 0 1 0 0
NO.9	0 0 1 0 0 1	1 0 0 1 0 0
NO.10	0 0 1 0 1 0	0 1 0 1 0 0
NO.11	0 0 1 0 1 1	1 1 0 1 0 0
NO.12	0 0 1 1 0 0	0 0 1 1 0 0
NO.13	0 0 1 1 0 1	1 0 1 1 0 0
NO.14	0 0 1 1 1 0	0 1 1 1 0 0

NO.15	0 0 1 1 1 1	1 1 1 1 0 0
NO.16	0 1 0 0 0 0	0 0 0 0 1 0
NO.17	0 1 0 0 0 1	1 0 0 0 1 0
NO.18	0 1 0 0 1 0	0 1 0 0 1 0
NO.19	0 1 0 0 1 1	1 1 0 0 1 0
NO.20	0 1 0 1 0 0	0 0 1 0 1 0
NO.21	0 1 0 1 0 1	1 0 1 0 1 0
NO.22	0 1 0 1 1 0	0 1 1 0 1 0
NO.23	0 1 0 1 1 1	1 1 1 0 1 0
NO.24	0 1 1 0 0 0	0 0 0 1 1 0
NO.25	0 1 1 0 0 1	1 0 0 1 1 0
NO.26	0 1 1 0 1 0	0 1 0 1 1 0
NO.27	0 1 1 0 1 1	1 1 0 1 1 0
NO.28	0 1 1 1 0 0	0 0 1 1 1 0
NO.29	0 1 1 1 0 1	1 0 1 1 1 0
NO.30	0 1 1 1 1 0	0 1 1 1 1 0
NO.31	0 1 1 1 1 1	1 1 1 1 1 0
NO.32	1 0 0 0 0 0	0 0 0 0 0 1

4. Multi-cameras Selection Control
The first step, set the camera address. According to the method described above, to definite of the camera number and set the corresponding address of the camera.
The second step, select the camera. Click "CAM" key to enter the ball machine selection mode, respectively, enter the numbers 0-9, can directly select the 9-below camera, do not need to press "ENTER" button to confirm. To set up nine or more numbered camera, press "-/--" key, you can enter values greater than 9, to delete the wrong, press "C" key, to confirm press "ENTER" key, then this number of camera choose successfully.
 The third step is to use other keys to control on the camera's operations.

IV. Highlight
1. The maximum operating speed of the camera is of 63.
2. A PTZ controller is defaulted can control 32 cameras, and most can control up to 127 (from No. 33 to start somewhere, need to use the software Write), up to 32 preset points can be set.
3. "A" and "B" can only be used to set the start and end location of the two cruise mode, and between the "A" and "B" it can not set other preset points.

To set more pre-set points, the method please accordance with Article 4 to set up.

4. Remote control of other key features please refer to the original manual.

V. In particular settings (For the PT dome which can't be opened)

1. Set address of PT dome:

a. Press the key of "CAM ", select the address number for the PT dome.

b. Then press the key "PRESET", "SETUP", hold on them 3 seconds for each.

2. Baud rate settings:

a. Press the "SETUP" key to enter the baud rate and protocol settings, choose to the baud rate and protocol which you want to use.

b. Then press the key "PRESET", "SETUP", hold on them 3 seconds for each.
